Continuation Sheet (PTOL-303)

Application No.

Continuation of 3. NOTE: Adding new limitations in claim 2 provides a previously unsearched combination that would require further consideration.

With regard to applicant's arguments, applicant's main point of contention is that the plastic plate as taught by Loibl lacks hydraulic distribution. Thorum teaches the ECU located above a support plate, said plate having hydraulic fluid distributed through fluid channels. Thorum lacks the teaching of said support plate being made of plastic. Loible teaches an ECU located above a support plate that is made of plastic. The plastic plate also comprises of channels 12. The combination is not removing the hydraulic distribution plate of Thorum and adding the support plate of Loibl. The combination is using the material teaching of Loibl (plastic) and applying that to the support plate of Thorum. Applicant's arguments have been considered, but are not persuasive.
